

SPECIAL RELEASE

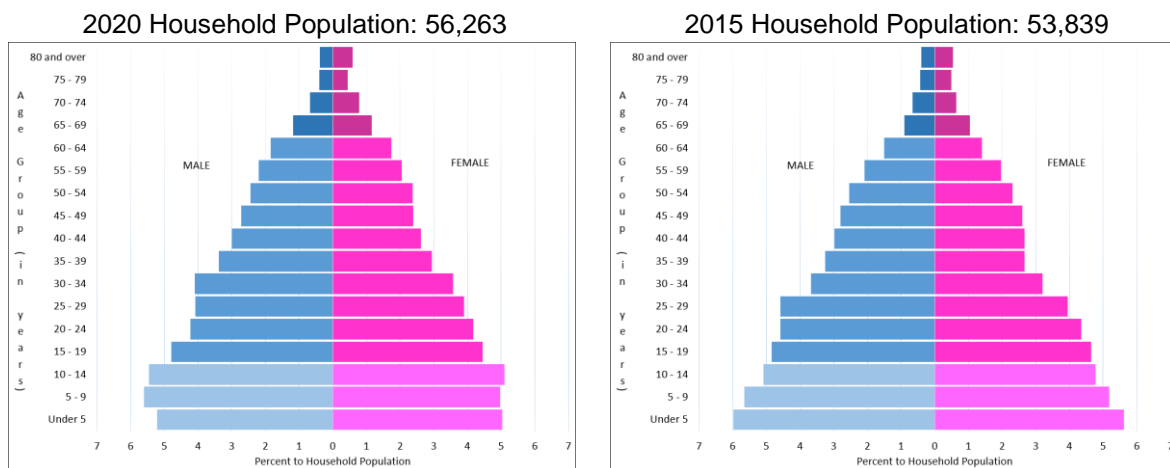

Age and Sex Distribution in Magsaysay (2020 Census of Population and Housing)

Date of Release: 05 June 2023
Reference No. SR-2023-06PSO24-014

The municipality of Magsaysay had a total population of 56,263 individuals based on the 2020 Census of Population and Housing or 2020 CPH. With 100% being the household population.

Of the 56.3 thousand household population in 2020, 51.7 percent or 29.1 thousand individuals were male and 48.3 percent or 27.2 thousand individuals were female. Categorically by age group, 17.6 thousand (31.4%) were young dependents or individuals under 15 years old while 35.5 thousand (63.0%) were the working-age group (15 to 64 years old) or the economically-active population. The remaining 3,162 (5.6%) were old dependents or individuals 65 years old and over. Individuals aged 0 to 14 years old, 15 to 64 years old, and 65 years old and over accounted for 32.3, 62.6, and 5.1 percent, respectively, of the household population of Magsaysay in 2015. (Figure 1).

Figure 1. Age-Sex Pyramid of Magsaysay: 2020 and 2015

Sources: Philippine Statistics Authority, 2020 Census of Population and Housing and 2015 Census of Population

Furthermore, among the age group of 0 to 54 years old, the number of males (87.1%) exceeded that of the number of females (86.0%). On the other hand, among the age group of 55 years old and over, there were fewer males (12.9%) than females (14.0%). A similar trend was also observed in 2015. (Figure 1).

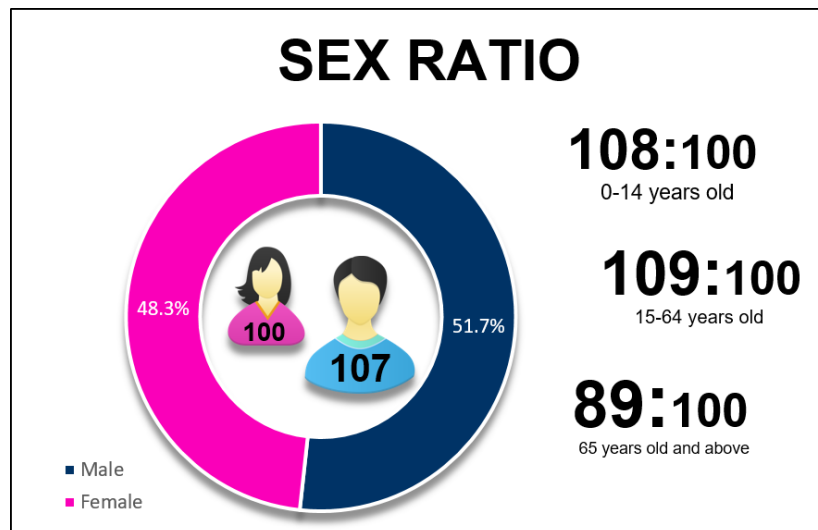

Computed median age is at 25.6 years

1. The median age in 2020 was 25.6 years. The median age of 25.6 indicates that half of the entire population were aged less than 25.6 and the other half were over the age of 25.6.

Sex Ratio dropped to 107 males per 100 females

2. Of the total household population in 2020, 51.7 percent were male and 48.3 percent were female. This translates to 107 males for every 100 females. Categorically by age group, individuals under 15 years old had a sex ratio of 108 males per 100 females, individuals aged 15 to 64 years old also had a sex ratio of 109 males per 100 females, and individuals aged 65 years old and over had a sex ratio of 89 males per 100 females. (Figure 2).

Dependency Ratio decreased to 59 dependents for every 100 individuals in the working-age group

3. The overall dependency ratio in 2020 was 59 dependents for every 100 individuals in the working-age group or economically-active population. Among the 59 dependents, 50 were young dependents and nine were old dependents. A higher trend was observed in 2015, where the dependency ratio was computed at 60 dependents, with 52 young dependents and eight old dependents.

Table 1. Age Dependency Ratio of the Household Population by Sex: Magsaysay, 2020 and 2015

	2020			2015		
	Both Sexes	Male	Female	Both Sexes	Male	Female
Overall	59	58	60	60	58	62
Young	50	50	50	52	51	52
Old	9	8	10	8	7	9

School-Age Population computed at 38.4 percent

5. The school-age population, consisting of 5 to 24 year old, accounted for 38.8 percent or 21.8 thousand of the 56.3 thousand household population in 2020. This

was lower than the result reported in 2015 which was 39.1 percent or 21.1 thousand. (Table 2 and Figure 3).

Figure 3. School-age Population by Sex: Magsaysay, 2020

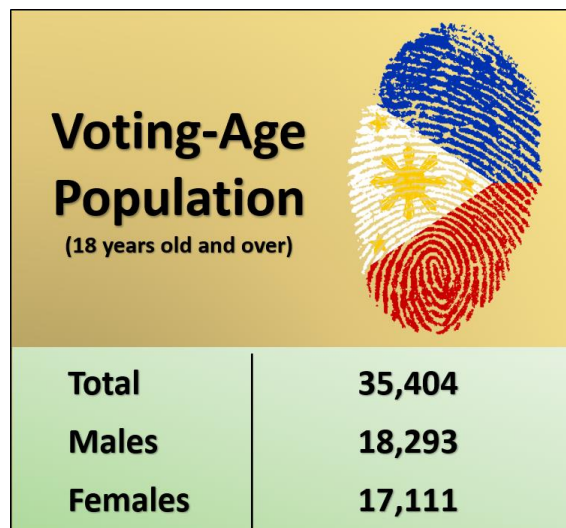

Source: Philippine Statistics Authority, 2020 Census of Population

More than three-fifths of the household population were of voting age

- The voting-age population or individuals aged 18 years and over account for 62.9 percent, or 35.4 thousand, of the total household population of Magsaysay in 2020. This is an increase from 61.9 percent, or 33.3 thousand, in 2015. (Table 2 and Figure 4).

Females outnumber males within the senior population

7. Of the total household population in 2020, senior citizens or individuals aged 60 years and over totaled 5,181 or 9.2 percent. This was higher than the 8.0 percent reported in 2015. Females (51.2%) outnumber males (48.8%) within the senior population in 2020 translating to a sex ratio of 95 males per 100 females. A lower trend was observed in 2015 with the senior population having a sex ratio of 94 males per 100 females. (Table 2 and Figure 5).

Aging index in 2020 increased by 4.5 points

9. Aging index refers to the number of seniors (aged 60 years and over) per 100 children younger than 15 years old in a specific population. Thus, the higher the index is, the older the population results. In 2020, the aging index was 29.4 percent, roughly translating to about three seniors per 10 children younger than 15 years old. The aging index in 2015 was 24.9 percent. (Table 2 and Figure 7).
