

SPECIAL RELEASE

Age and Sex Distribution of the Household Population in Maco, Davao de Oro (2020 Census of Population and Housing)

Date of Release : 11 May 2023
Reference No. : SR-231182-013

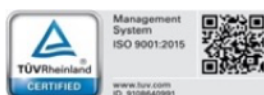

Males outnumber females in Maco by 3.8 percent

Based on the 2020 Census of Population and Housing (2020 CPH), Davao de Oro had a household population of 766,299 persons. Of this total, 10.8 percent or 83,003 persons were comprised of the household population from the Municipality of Maco.

Of the 83,003 household population of Maco in 2020 43,090 (51.9%) were males while 39,913 (48.1%) were females. By age group, 25,706 (31.0%) were under 15 years of age (young dependents) wherein there were more males (51.8%) than females (48.2%) among them. (Table 1 and Figure 1)

On the other hand, persons 15 to 64 years (working-age or economically-active population) totaled to 52,944 (63.8%) and still, males (52.4%) outnumbered the females (47.6%) by 4.8 percent. While those in age groups 65 years and over (old dependents) comprised the remaining 4,353 (5.2%) wherein there were more females (53.7%) than males (46.3%). (Table 1 and Figure 1)

In 2015, the total household population of Maco aged 0 to 14 years, 15 to 64 years, and 65 years and over accounted for 31.8, 63.6, and 4.6 percent, respectively. (Table 1 and Figure 1)

Sex ratio stands at 108 males per 100 females

The sex ratio in Maco was computed at 108 in 2020. This means that there were 108 males for every 100 females. (Figure 2)

In addition, children aged below 15 years had a sex ratio of 108 males per 100 females, while those aged 15 to 64 years had a sex ratio of 110 males per 100 females. Moreover, among those aged 65 years and over, the sex ratio was 86 males per 100 females. This depicts a longer life expectancy among females than males or higher mortality rate among males than females in the older age groups. (Figure 2)

Aging index is at 26.7 percent in 2020

In Maco, the aging index or the proportion of persons aged 60 years and over per 100 persons under the age of 15 years was computed at 26.7 percent in 2020. This means that there is one person aged 60 years and over for every four children under 15 years old. (Table 3)

Technical Notes:

Household is a social unit consisting of person or a group of persons who sleep in the same housing unit and have a common arrangement in the preparation and consumption of food.

Household population refers to all persons who are members of the household.

Sex is the biological and physiological reality of being a male or female.

Age refers to the interval of time between the person's date of birth and his/her last birthday prior to the census reference date. It is expressed in completed years or whole number.

Population pyramid is a bar chart, arranged vertically, that shows the distribution of a population by age and sex. By convention, the younger ages are at the bottom, with males on the left and females on the right.

Sex ratio is the number of males per one hundred females in a population.

Median age is the age that divides the population into two numerically equal groups; that is, half of the population are younger than this age and the other half are older.

Overall dependency ratio is the number of persons under 15 years old (young dependents) and persons aged 65 and older (old dependents) per one hundred persons 15 to 64 years old (working-age or economically-productive group) in a population.

Aging of population is a process in which the proportions of adults and elderly increase in a population, while the proportions of children and adolescents decrease. This process results in a rise in the median age of the population. Aging occurs when fertility rates decline while life expectancy remains constant or improves at the older ages.

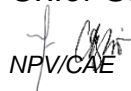

Aging index is calculated as the number of persons 60 years old and over per one hundred persons under the age of 15 years.
